

Gate Automation solutions in Ports and Dry Ports

Ing. Massimo Massa

Aitek SpA

February 16, 2017

Focus

Currently many checks at access gates require the presence of personnel and this negatively affects the efficiency (increased time duration, not always reliable inspections).

Our solution

The background of the slide is a photograph of a port or industrial facility. Several large white trucks with blue accents are visible, some stopped at barriers. The scene is filled with industrial structures, including cranes and metal frameworks. A semi-transparent white banner with the 'sesamo gate' logo is positioned in the upper left. A blue semi-transparent box containing a list of benefits is in the lower left. The bottom of the slide features a solid blue bar with the 'aitek' logo and a page number.

sesamo gate

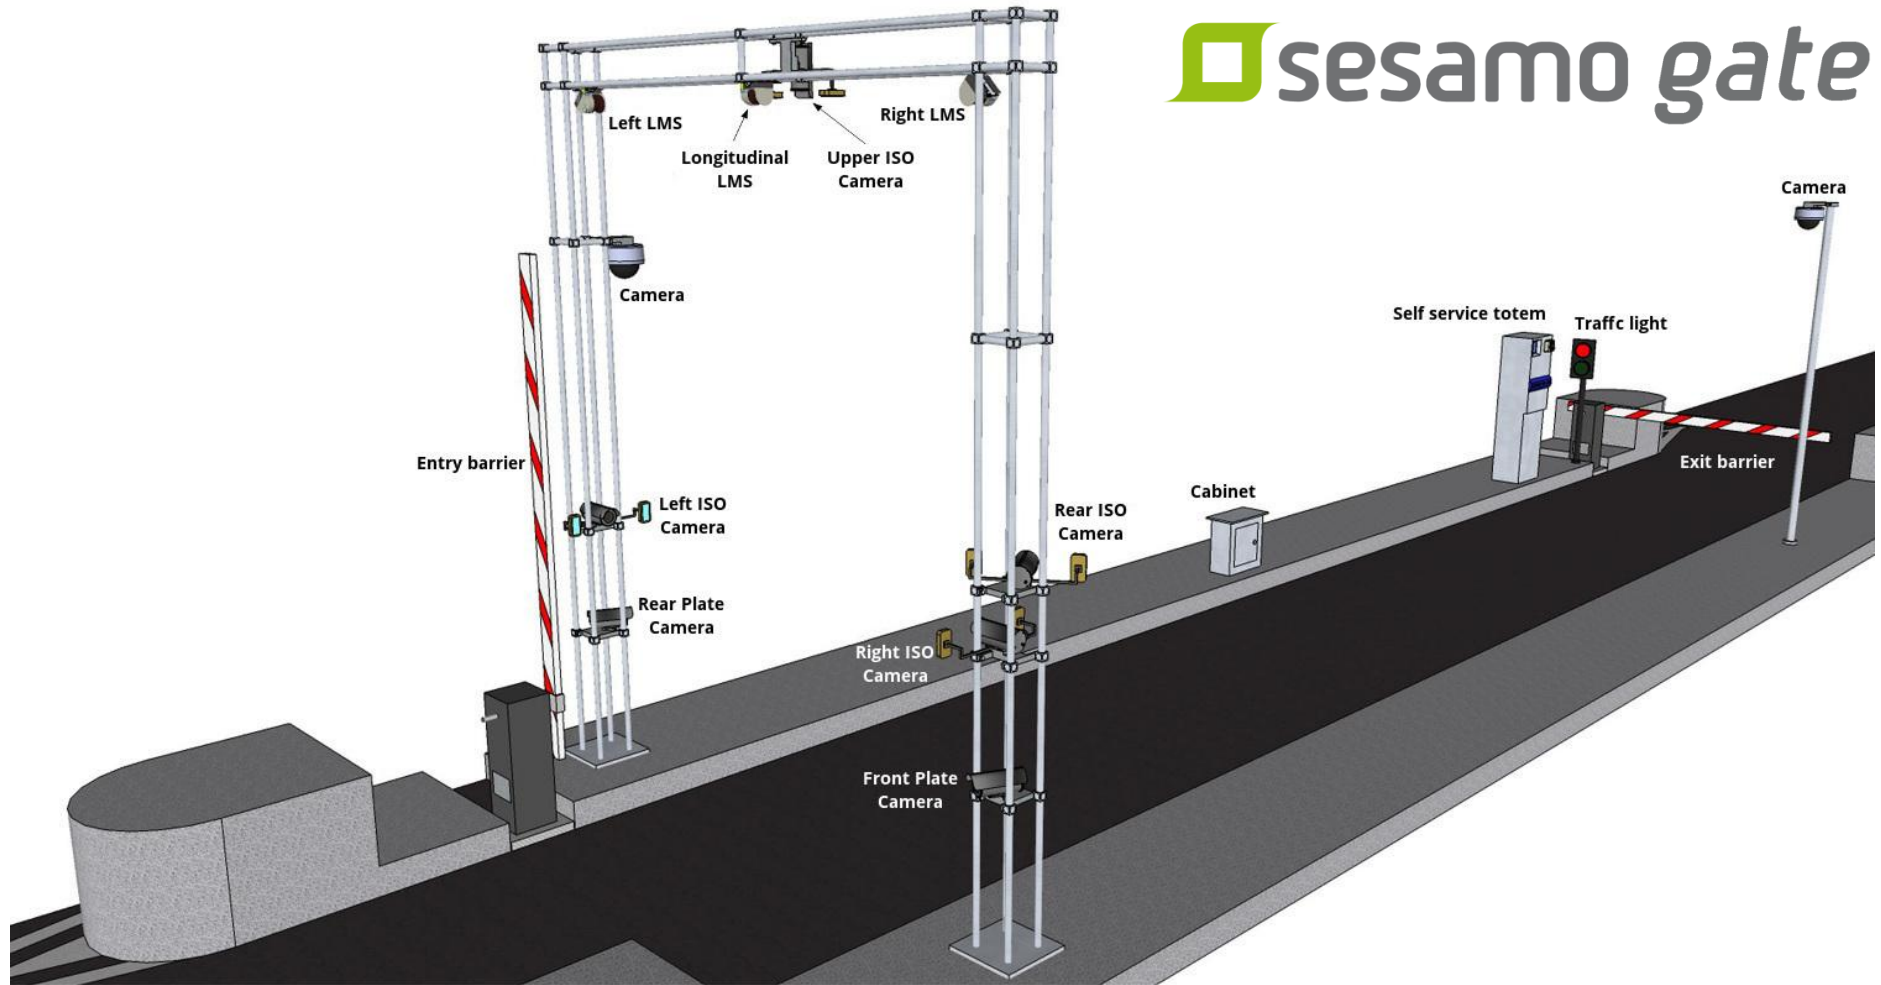

- ✓ Remote/unmanned control of transit procedures
- ✓ Improved reliability of vehicle/load inspections
- ✓ Improving security and accuracy of acquired data
- ✓ Reducing the duration of check/inspection procedures

Our solution

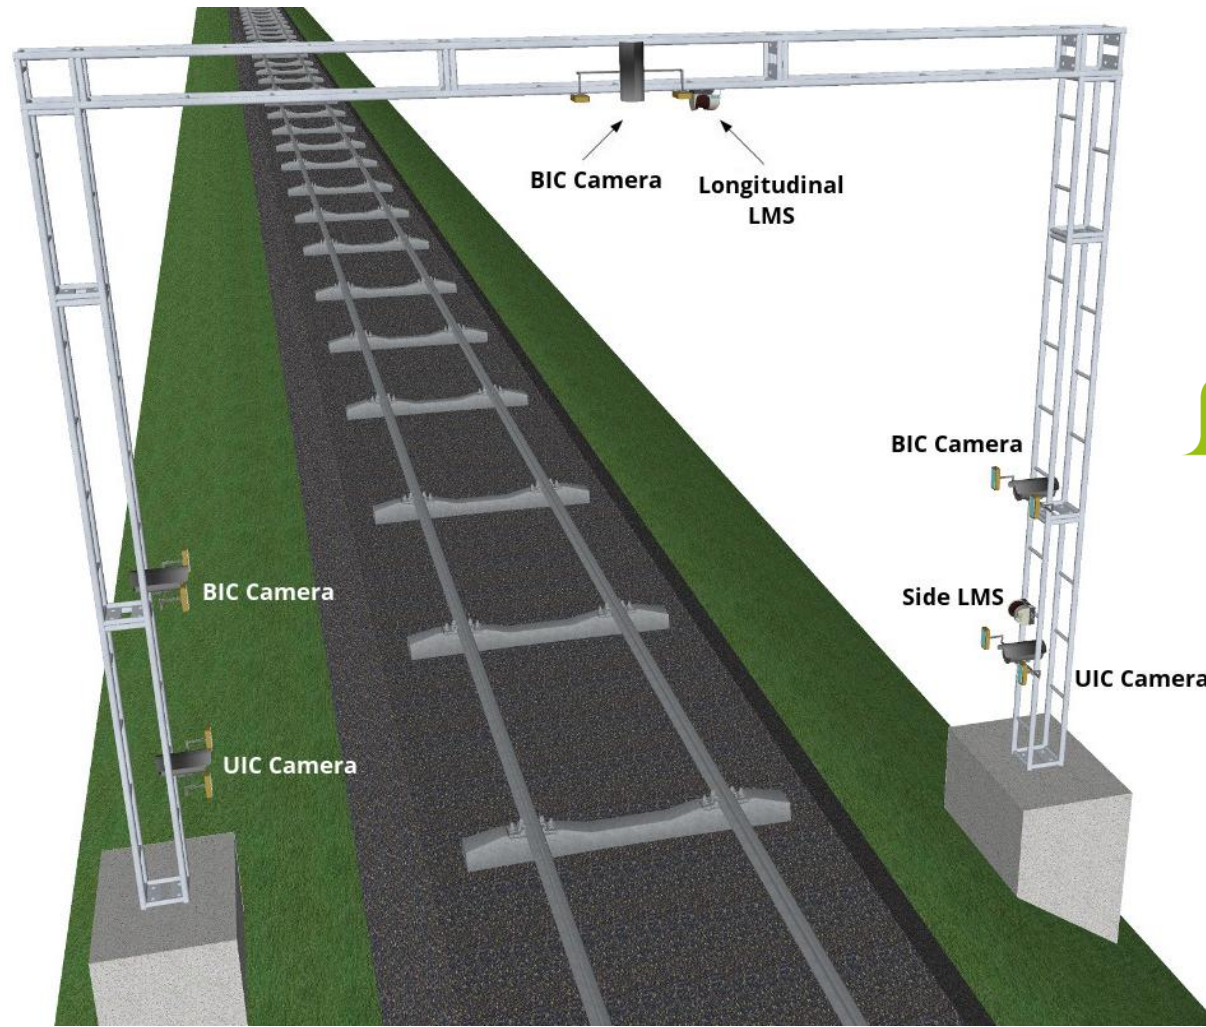

Digital video technology allows customized solutions for the automation and remote management of the transit procedure of vehicles, containers and goods at roadway or railway access gate

Roadway gate infrastructure

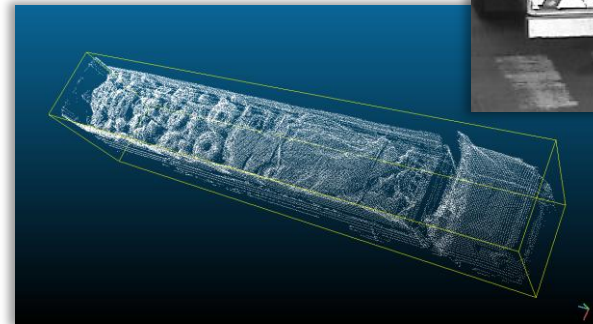

Railway gate infrastructure

 **sesamo gate**

Real-time acquisition of:

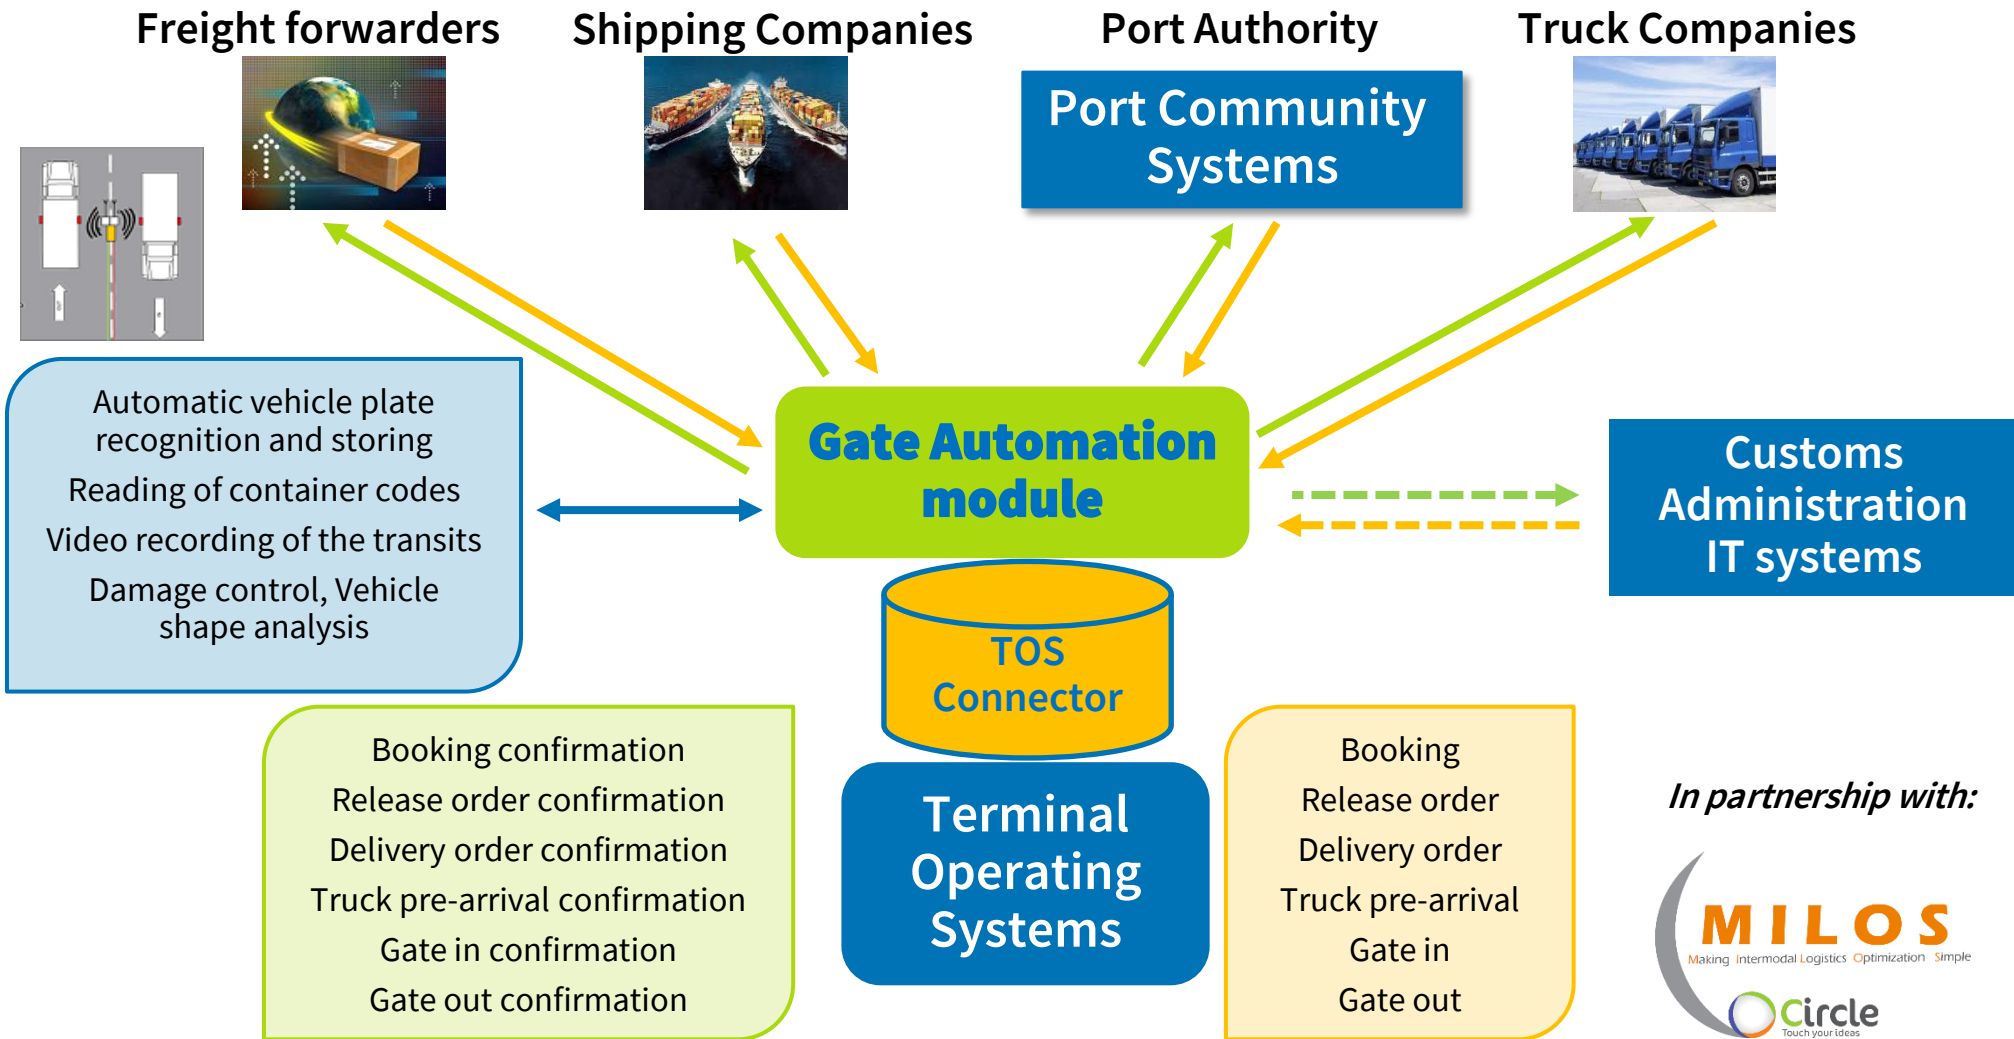

- ✓ license plates of vehicles and trailers
- ✓ ISO 6346, ILU, UIC and ADR codes
- ✓ shape and dimensions of vehicles in transit
- ✓ HD images for container integrity verification

User interface

Example of supply chain integration
