

Railway innovation: *our vision.*

- Different companies and expertises → one **network** integrating **RAIL TRANSPORT**, **SHUNTING**, **MAINTENANCE**, **TRAINING** and **INNOVATION/R&D** (300 employees, 50 million euro turnover)

How we innovate: *integration.*

How we innovate: *a systemic approach to freight transport.*

- Logistic criticalities limiting intermodal transport: time and costs of shunting → only **specific types of goods** can access the rail mode with **fully loaded trains** from point A to point B
- Intermediate stops** as an opportunity to recover goods → **new technological solutions** allowing quick load/unload of single portions of the train
